 Contribute

The Idaho Master Naturalist Program aims to develop a group of well-informed volunteers to actively work toward stewardship of Idaho's natural environment.

Who can become an Idaho Master Naturalist?

Any adult who enjoys nature and is interested in learning more. If you enjoy outdoor recreation, bird watching, identifying plants and animals, gardening, and supporting conservation, this program is for you!

Idaho Master Naturalists can volunteer at the Waterlife Discovery Center, give programs to children, help biologists collect data, monitor wildlife, assist at parks and natural areas, or contribute to many other conservation efforts.

Anyone who enjoys and appreciates Idaho's outdoors can be an Idaho Master Naturalist; teachers, hunters, nature guides, farmers, retired professionals, and ...you!

Through the Idaho Master Naturalist Program you will:

- Participate and guide conservation efforts.
- Join a statewide network of dedicated, trained volunteers who work toward conservation.
- Further your education and interest in nature.
- Have an opportunity to give back to your community.

- Sandpoint-Pend Oreille Chapter
- McCall-McCall Chapter
- Rexburg-BYU Idaho Chapter
- Ontario OR-Treasure Valley Community College (TVCC) Chapter

Study the natural world of Idaho and make a difference!

An Idaho Master Naturalist completes 40 hours of hands-on, experiential education about Idaho's ecology, plants, animals and natural systems. Master Naturalists may participate in the Conservation Education track, Citizen Science track, or both.

- **The Conservation Education track** prepares participants to help teachers, agencies, and nonprofit organizations teach children and adults about nature and why conservation is important. Assisting with field trips to the Waterlife Discovery Center, giving a program to school children, staffing an agency booth, or leading a nature hike might be some activities for participants of this track.
- **The Citizen Scientist track** prepares participants to help biologists and researchers collect data and monitor plants and animals. Collecting grizzly bear hair, scouting for wolverines, gathering kokanee eggs, monitoring streams, or inventorying plants might be some activities a Citizen Scientist would do.
